

Assignment-1

1. Write a script to print your College name.
2. Write a script for various mathematical operations. (Addition, Subtraction, Multiplication, Division)
3. Write a script for various mathematical operations. (Taking input from user)

Assignment-2

1. Taking the values of length and breadth of a rectangle from user and also check it's a square or not.
2. Taking three numbers from user and print the greatest numbers among these numbers.
3. Check a year is a leap year or not.
4. Check the attendance of the student is less than 75%. He or she has some medical issues or not. Taking inputs Y/N and if "Y" then allow him or her.
5. Write a python program to find the remainder when a number is divisible.
6. Find the average of the two numbers entered by the user.
7. Calculate the square of a number entered by a user.
8. Write a python program to determine a triangle is Scalene, equilateral or Isosceles triangle.
9. Write a program to do the following operations:-
 - Read only two positive integer numbers (n1 and n2) and one character type operator (say operation). Note that the operation is any mathematical operations.
 - Depending upon the operator do the appropriate operation if operation is "+ve" then display the value obtained by evaluating the expression (n1 + n2)

Assignment-3

1. Using while loop, write a program to print numbers in a user given range.
2. Using while loop, write a program to print all odd numbers to a given range.
3. Using while loop, write a program to check a number is perfect or not.
4. Using while loop, write a program to check a number is prime or not.
5. Using for loop write a program to print the first 0 even numbers in the reverse order.
6. Using for loop, write a program to print table of a number given by the user.
7. Using for loop, write a program to find the factorial of a given number given by the user.
8. Using for loop, write a program to print all prime numbers between two numbers including both.
9. Using for loop, write a program that keep on accepting numbers from user until the user enters ero. Display the sum and average of all the numbers.
10. Write a program to print the following:
5 5 5 5 5
4 4 4 4
3 3 3
2 2
1

Assignment-4

1. Write a program to interchange first and last elements in a list.
2. Write a program to reverse a list.
3. Write a program to count odd and even numbers in a list.
4. Write a program to print the second largest number in list
5. Write a program to count positive and negative numbers in a list.

Assignment-5

1. Write a python program to swap two tuples.
2. Write a python program to copy specific elements from one tuple to new tuple.
3. Write a python program to add Tuple to list and also vice-versa.
4. Write a python program to find Modulo of tuple elements by input two tuples.
5. Write a python program to create a list of tuples from given list having number and its cube in each tuple.

Assignment-6

1. Write a program to create a dictionary and do the following:-
 - Sort Dictionary by Key
 - Sort Dictionary by Value
2. Write a program to calculate grade, creating a dictionary that contains student's name, assignment marks, lab marks and test marks.
3. Write a program to input two dictionary and search for s key from first dictionary. If present in value of second dictionary.
4. Write a program to replace word from dictionary.

Assignment-7

1. Write a program to generate the Fibonacci series.
 2. Write a program to check a number is Armstrong or not.
 3. Write a program to check a number is Special or not.
 4. Write a program to check a String is palindrome or not.
